Prompt

Closed-Loop Inference

Task Goal: Generate the future trajectory of a moving target based on its historical positions.

Description: Given the historical trajectory of a target, predict its future positions in the same structured format. Use the provided examples as guidance.

Example 1:

Input: "Historical trajectory: 0s: (1.0, 1.0) → 1s: (1.3, 1.7) → 2s: (1.7, 2.2)."

Output: "Predicted trajectory: 3s: (2.0, 2.5) → 4s: (2.3, 2.8)."

Example 2:

Input: "Historical trajectory: 0s: (0.5, 0.6) → 1s: (0.8, 1.0) → 2s: (1.1, 1.4)."

Output: "Predicted trajectory: 3s: (1.4, 1.8) → 4s: (1.7, 2.1)."

Now, generate the prediction for:

Input: "Historical trajectory: 0s: (1.2, 1.1) → 1s: (1.5, 1.8) → 2s: (1.9, 2.4) ."
